

Flexible Setup for Multiple JobComposers and Multiple PrintQueues

The Sequoia Feature Pack is available as an option for Ergosoft 16. Simply add the Sequoia Feature Pack to Ergosoft 16 Production to connect multiple workstations into one production department, empowering you with total production visibility and control.

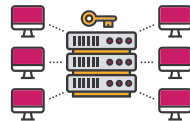

Sequoia Highlights

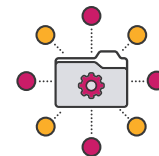

Production Management

- + Manage your customer data
- + Estimate the production costs
- + Generate production data reports
- + Export your complete production data

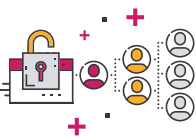

Floating License

- + One single dongle needed
- + Distribute license modules across the network
- + Facilitate more flexible use of the system

Shared Storage

- + Share company standards across the network: Environments, Presets, Preflights, JobTickets, Production Settings, Color Settings, Swatchbooks, Named Colors Profiles, User Access Rights
- + Ensure uniform workflow configurations

User Access Rights

- + Create custom User Levels to prevent Color Management and Job Processing settings from being changed
- + Protect company standards to enhance quality control across multiple shifts and different users
- + Prevent costly errors

Production Visibility (Queue Manager)

- + Manage your complete print production within one window
- + Switch comfortably between the views of your different printers
- + Add filter views for each printer or workstation whenever it is needed
- + Customize your workspace according to your preferences by freely moving and docking the panes

Production Control (Central JobQueue)

- + Faster decisions and more efficient work
- + Total production visibility to every workstation: all production activity (job status, RIP Settings, etc.) is tracked and displayed)
- + Total production control: start, stop, monitor and change priority of all active jobs from any workstations in the network

Why Is Sequoia The Right Solution For Me?

Large Company

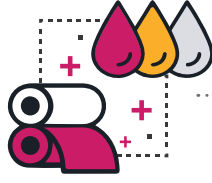

Orders can be quickly processed, as all jobs can be routed to and processed by any PC in the network.

1 ORDER

All job data is visible

Ensure profitability with enhanced cost-calculating tools

2 INK & MEDIA

Quickly create cost estimates for new jobs to win a new client

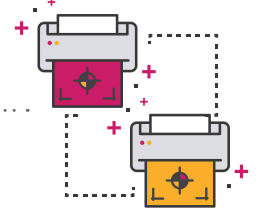

Spot Color Libraries are available to every RIP station in the network, making color matching quick and efficient

3 RIP STATION

Easily add a new station to the production department as your company grows

Maximize productivity with full visibility to all printers at any time

4 PRINTING

Quickly change priority of a job to process a hot order

Small Company

Configure, Use And Expand The System According To Your Needs

You can enhance your Sequoia configuration at any time by adding additional RipEngines, additional JobComposers, drivers and Print- and/or CutQueues for additional printers or cut devices or options, like Step & Repeat, ColorCombine, TrueShapeNesting, Background Color Removal or the ColorGPS Profile Editor.
